

David Skopec

Head of Visual Communication, Kognito gestaltung, Berlin / ZHdK Zürich

Designer, Founder of kognito gestaltung in Berlin, several activities at different universities in Europe, Latin America, Asia. Responsible for the Information Design Program in Zurich at the ZHdK.

oVIS - Real-Time-Visualization of Extended Databases of Social Indicators (EUSI/DISI)

Abstract:

oVIS is an extended online application that gives you full access to large amounts of social indicators used in the European Community and other overseas countries. The central approach is to generate various visualizations as a key to abstract and complex types of data. Visualization is used as a tool for data access on the one hand and on the other hand to evaluate its numbers and figures. Therefore oVIS allows the usage of several tools for analysis and data-storage.

oVIS is a project of the German research institute ZUMA-GESIS and was developed by the designers and programmers of kognito gestaltung in Berlin.
